

"GET THE EDGE" "...The New Rose Stamped Edge"

A.J. Rose has developed a new patent pending process which yields a virtually perfect edge condition, where typically, you would have die roll, shear, and breakout.

The new process allows the speed and efficiency of a stamping with the edge condition of a fine blanked, machined or powdered metal part. Conversion from machined castings, PM or fine blanked parts will reduce weight, improve functionality and lower costs.

The applications are endless – let A.J. Rose convert your edge and sharpen your bottom line!
